

Thank you for choosing **StompStation**.  
This **Quick Start Guide** provides the  
essential steps to maximize your  
experience.

The **StompStation** platform is designed  
for diverse applications. **AmpStation** is  
the pre-installed one: advanced amp  
simulation with **NAM** (Neural Amp  
Modeler) support. Enjoy!

Download **VoidX-Control**

**VoidX-Control** makes  
**StompStation** a breeze. This  
powerful editor lets you effortlessly  
craft your sound and manage your  
amp models, presets, and IRs.

Download it from your platform's  
**store** or from  
[www.voidxdevteam.com/downloads](http://www.voidxdevteam.com/downloads)

A world of **Amp Tones**

 **ToneHunt**

Experience the future of amp  
simulation with **NAM** (Neural Amp  
Modeler). Join a thriving **community**,  
access countless **top-quality** free  
models, and even **recreate** your own  
amp setup digitally.

Start your journey at **tonehunt.org** or  
explore our tone selection on our  
website, crafted by top **Italian Sound  
Engineers!**

## You are ready to play!

**Power** your StompStation using  
a standard 9V DC (center  
negative) adapter or via USB

Plug your instrument to **INPUT 1**

Connect your listening system to  
**OUTPUT 1** and/or **OUTPUT 2**  
or use your **Headphones**.

Get the full user manual on our website for more  
information.
